

Aniel Someillan Galarraga

Microsoft Dynamics 365 Developer | Power Platform | C# · .NET | PL-400 Certified
anielsomeillan@icloud.com · +48 784 161 684

PROFESSIONAL SUMMARY

Dynamics 365 and Power Platform Developer with 5+ years in the industry — four delivering enterprise CRM solutions at EY across Customer Engagement, Power Pages and AI integration, preceded by 18 months freelance. Proven across the full implementation lifecycle — from requirements and functional design through to UAT and post-go-live. PL-400 certified. Currently building a Power Pages case-management portal in the higher-education sector, with recent hands-on delivery of Canvas App and AI Agent solutions using Azure OpenAI, RAG and Document Intelligence on live enterprise programmes.

CORE COMPETENCIES

Dynamics 365 & Power Platform	Dynamics 365 Customer Engagement (Sales · Customer Service · Field Service) · Power Pages / Portal · Canvas App · Model-Driven App · Dataverse Plugins · PCF Controls · Power Automate · Power BI · Azure Logic Apps · Azure Functions · Dataverse / CDS · AI Agents · Azure OpenAI · RAG · Document Intelligence · Custom Connectors
Development	C# · .NET · JavaScript · TypeScript · React · Fluent UI · HTML5 · CSS3 · Liquid · Python · jQuery
ALM & Tools	Application Lifecycle Management (ALM) · CI/CD Pipelines (Azure DevOps) · Managed/Unmanaged Solutions · Git · Power Portal CLI · FetchXML Builder · Docker · Snowflake · PostgreSQL · MongoDB · Firebase
Certifications	PL-400: Power Platform Developer Associate · AZ-900: Azure Fundamentals · PL-900: Power Platform Fundamentals · EY AI Engineering – Bronze · EY Dynamics 365 – Bronze
Languages	English – C1 · Portuguese – C2 · Spanish – Native · Polish – A2

PROFESSIONAL EXPERIENCE

ERNST & YOUNG (EY)	Warsaw, Poland
<i>Microsoft Dynamics 365 / Power Platform Developer · August 2022 – Present</i>	
Software Developer — Power Pages Portal & Case Management	Jul 2026 – Present
<i>Student Welfare Support Portal · UK Higher-Education Sector</i>	
- Building a Dynamics 365 / Power Pages portal for a UK university to manage student wellbeing and welfare support requests, giving staff and students a single self-service intake and case-tracking channel - Modelling the case and permissions structure in Dataverse to support "submit on behalf of" workflows, enabling staff to raise and track support requests for students in a sensitive, people-facing use case	
Software Developer — Native Pages & Custom Pages	Mar 2026 – Present
<i>Deal Enablement Project</i>	
- Built custom Dynamics 365 Customer Engagement interfaces for an enterprise sales enablement programme by developing Native and Custom Pages using React (Fluent UI), PCF controls and Dataverse REST API - Improved complex data query performance across reporting requirements by extending the Dataverse entity model using FetchXML Builder and Metadata Browser - Shortened functional design review cycles by contributing technical specifications to solution design documentation across stakeholder walkthroughs alongside solution architects - Enabled real-time front-end to back-end data access by integrating Web Resources with Dynamics 365 Customer Engagement via Dataverse REST API	
Software Developer — Canvas App & AI Integration	Aug 2025 – Mar 2026
<i>IO App [Moonshot Program]</i>	
- Delivered an enterprise Canvas App integrated with Azure OpenAI and AI Agents for EY's Moonshot innovation programme, reducing operational processing time across the platform's core execution workflows - Eliminated manual document classification and data extraction overhead by implementing a RAG architecture using Azure Document Intelligence for automated document processing - Extended Model-Driven App capabilities for Dynamics 365 Customer Engagement users by building custom PCF controls in TypeScript and C# (.NET) targeting Dataverse - Removed manual approval bottlenecks by engineering Power Automate flows connecting Dynamics 365 CE with downstream enterprise systems	

Software Developer — Canvas App

Feb 2024 – Mar 2025

IO App

- Delivered an end-to-end Canvas App with Power BI dashboards and Snowflake integration via Dataverse (CDS), giving enterprise execution teams real-time operational visibility across the programme
- Reduced manual task coordination overhead across teams by automating business workflows in Power Automate, orchestrating Microsoft Planner and To Do
- Delivered technical implementation aligned to business process design with no post-go-live requirement changes by collaborating with functional consultants during requirements analysis
- Surfaced operational KPIs for management decision-making by integrating the Mavin analytics layer within the Canvas App

Software Developer — Power Pages Portal

Aug 2022 – Jan 2024

EYTC Platform

- Led full technical delivery of EY's Trade Compliance platform (Power Pages) for enterprise clients across international markets, owning the implementation from requirements gathering and functional design through to post-go-live stabilisation
- Eliminated recurring manual compliance checks by automating custom business validation and workflow rules through C# plugins on .NET extending Dataverse server-side business logic
- Reduced data entry errors across complex form types by implementing JavaScript / jQuery client scripting for dynamic field behaviour and Dynamics 365 Customer Engagement UI customisation
- Enabled bi-directional data exchange between the EYTC portal and external legacy systems by integrating Power Portal via Power Automate and custom REST API connectors
- Achieved smooth enterprise user adoption by supporting UAT execution, deployment pipeline management and post-go-live stabilisation across stakeholder groups
- Translated operational requirements into Dynamics 365 configuration and development specifications by participating in functional design workshops alongside business analysts and solution architects
- Delivered environment promotions with zero rollback incidents by managing version-controlled releases and CI/CD deployment pipelines in Azure DevOps, using Power Portal CLI and Git across development, staging and production

BONES STUDIO

Freelance · Warsaw, Poland

Frontend Developer · January 2021 – July 2022

- Increased organic search visibility for Bones Studio's web presence by building a Next.js / React blog platform with on-page SEO optimisation and WordPress CMS integration
